DETAILED ACTION***Response to Arguments***

Applicant's arguments filed 6/1/01 have been fully considered but they are not persuasive. Applicant argues that the cross linking agents of the reference are protected, whereas the instantly claimed cross-linking agents are unprotected. The instant claims do not require that the cross-linking agent be unprotected. Furthermore, the applicant argues that they are non-reactive for different reasons. Still they both have the same function, result and mode of activation (heat) and consequently read on one another. The applicant goes on to argue that the de-protection of the cross-linking agent of the reference creates a byproduct that is undesirable. The applicant should offer evidence, in the form of a declaration, that the byproducts reference would adversely affect the instantly claimed product. The applicant also argues that he processes steps concerning the temperatures are different, however the applicant's invention is drawn to compositions and not processes.

Therefore, claims 1-39 continue to stand rejected under 35 U.S.C. 102(b) as being anticipated by Capote et al. (5,376,403).
